CH1 Homework

- In example 14, if we have one new step R-, that means a backward walking x=x-1, think about how to calculate the number of paths from (2, 1) to (7, 4). Note that R- can't follow by a step R.
  - Also, if we have U-?
  - Do we need some constraints?
  - Give an example problem (programming) this assignment related to.

- Due: 3/9 10am

CH1 Quiz Practice

- **1-2:** 22, 28, 34
- **1-3:** 18, 26
- **1-4:** 18, 25, 26
- Supplementary: 26

- **Homework Quiz**
  - Every two chapters
  - 6:00PM, 1-hour quiz
  - Open book
