Chapter 17

ASP.NET Web Application

17-1 Introduction to ASP.NET

- Server establishment is required when designing Web application
- ASP.NET web page program(*.aspx) has to run on a server installed with IIS

ASP.NET Web Page Chart Design

- Usage of Chart control item
 - ⇒ set data source of Chart as SqlDataSource control item
 - ⇒ query and statistic result of SqlDataSource will be shown on Chart
- Examples:

 Use Chart to draw chart on web page.

Use "產品類別" and "產品資料" table to calculate how many products the category has.

Then use bar chart and pie chart to show the result

Design User Interface

Step1 Operate [file(F)/add new project(P)]

Step2 Operate [project(P)/add in existed project(G)]

Step2.1 Operate [project(P)/add in existed project (G)]— choose chartitle.jpg

Step2.2 Operate [project(P)/add in new file ASP.NET(S)/App_Data(A)]

Step2.3 Operate in the file of App_Data [project(P)/add in existed project (G)]—choose database Northwind.mdf

Step2.3

Operate in the file of App_Data [project(P)/add in existed project

Step3 Operate [project(P)/ add in item 目 (W)]—choose Web Form

Step4

Make a Title

Step4 Make SqlDataSource1,Chart1,Chart2

Step5 Make SqlDataSource1連結Northwind.mdf

Step5.1

Input the description of SQL like the following:

SELECT 產品類別.類別名稱, COUNT(產品資料.產品編號) AS 產品總類 FROM 產品資料 INNER JOIN 產品類別 ON 產品資料.類別編號 = 產品類別.類別編號

GROUP BY 產品類別.類別名稱 設定資料來源 - SqlDataSource1 定義自訂陳述式或預存程序 請按某個索引標鏡,建立該作業的 SQL 陳述項。 SELECT UPDATE INSERT DELETE SQL 陳述式(S): SELECT 產品類別.類別名稱, COUNT(產品資料.產品編號) AS 產品總類 FROM 產品資料 INNER JOIN 產品類別 ON 產品資料.類別編號 = 產品類別.類別編號 GROUP BY 產品類別.類別名稱 查詢產生器(Q)... ● 預存程序(T): 下一步(N) > < 上一步(P) 完成(F) 取消

Step5. 2 Test to search→complete

Step6 Set the information resource for Chart1 : SqlDataSoruce1

<	Chart 工作		
)	選擇資料來源	SqlDataSource1	¥
	設定資料來源		
	重新整理結構描述		
	圖表類型	[] Column	~
	Series1 資料成員		
	×值成員	類別名稱	~
	Y值成員	類別名稱 産品總額	

Step6.1 Set the information for Chart2 : SqlDataSoruce1

Step7 operation result

Practice_ASP_CHART

Create Line chart to show doctors' salary
